REPORT OF THE CARAVAN OF MULTI-DISEASE AWARENESS AND SCREENING HIV, HEPATITIS B & C, DIABETES

FROM 09 TO 14 DECEMBER 2019

Abidjan Transport Company (SOTRA) // CEMOI Chocolate Factory
In partnership with certain organizations, in particular, Santé en Entreprise (SEE), based in France, and its subsidiary Santé en Entreprise Afrique (SEA), located in Abidjan, in Côte d'Ivoire, and other technical partners, we participated, from December 09 to 14, 2019, in Abidjan at the Caravan of Awareness and Screening for multi-disease HIV, Hepatitis B & C, Diabetes, in two (02) companies:
1. The Abidjan Transport Company (SOTRA);
2. The CEMOI Chocolate Factory.
It was a timely opportunity for us to broaden our usual campaign-focused patterns:
   a. Only on viral hepatitis;
   b. Viral hepatitis and high blood pressure;
   c. Sometimes viral hepatitis, high blood pressure and diabetes.
It should be noted that the multi-disease approach makes it possible to bring together a larger number of people, unlike the "single disease" approach (one disease), viral hepatitis or other pathology.
During this multi-disease caravan, our target population was estimated at 750 people. At the end of the campaign, we screened 1,359 people, or 181.2% of our initial target.
In general, according to the "general report on the Awareness and Multi-disease Screening Caravan HIV, Hepatitis B & C, Diabetes:
• "Companies have contributed to the success of this caravan by providing an adequate framework for the organization of this activity;
• Populations are more open to screening when it takes into account several diseases;
• The head of the NGO SOS HEPATITES CÔTE D'IVOIRE, Mr. YOMAN Boniface, facilitated the acquisition of communication tools, inputs for the detection of hepatitis B and C, as well as condoms through his network of partners. He also ensured, during the 5 days of screening, awareness raising and provided support for the management of positive screened cases. He also made a plea for the follow-up of people screened negative so that they are vaccinated as soon as possible, 3 months maximum."
In the following summary tables, we only present the screening data for viral hepatitis. We have extracted those for HIV, high blood pressure and diabetes.

Advocacy by the President of SOS Hépatites Côte d’Ivoire (standing) with General Management so that viral hepatitis is listed as one of the priority axes of the CEMOI health policy.
At the CEMOI Chocolate Factory, workers sensitized on the risk factors for viral hepatitis brought their husbands, wives and children for information, awareness-raising and screening sessions (Picts 9/10/11/12/13/14 / 15/16).
HEALTH

Health: a caravan relies on a multi-disease screening approach in the business environment

Erick Maville, Director General of the Health Association, is in order to promote multi-disease screening, notably for HIV, viral Hepatitis B and C, tuberculosis, diabetes, hypertension en Entreprise (SEE) launched this Monday, December 9, 2019, in the Ivorian economic capital, Abidjan, the health caravan.

Erick Maville, Director General of the Health Association, is in order to promote multi-disease screening, in particular for HIV, viral hepatitis B and C, tuberculosis, diabetes and hypertension. en Entreprise (SEE) launched this Monday, December 9, 2019, in the Ivorian economic capital, Abidjan, the health caravan.
According to Mr. Maville, the health caravan is an itinerant operation set up by the SEE in collaboration with the Health Enterprise Africa (SEA) program as well as the technical and financial partners.

If you believe it, this operation is a way for them to raise awareness among companies, their employees or associates and the population about these diseases. "The aim of our caravan is to promote all the screening tests for hepatitis B and C in the context of multi-disease screening," he said.

During these five days of screening, it will involve deploying a mobile awareness and screening device intended for employees of participating companies, their subcontractors, autoentrepreneurs as well as the surrounding populations, indicated the CEO of the SEE.

Following Sognoko Alain, SEA project manager, presented the caravan program. "From December 10 to 11, 2019, our teams will be in the port area of Vridi, and from December 12 to 14 in the industrial area of Yopougon".

"This caravan is of paramount importance, because viral hepatitis is a disease unknown to people and is 100 times more dangerous than AIDS," said Yoman Boniface, president of SOS Hepatitis.

For Koudou Josiane, president of the nurses association of Côte d'Ivoire (AIICI), investing in human resources is investing in "prevention", while launching an appeal to companies to allow their workers to be tested.

At least 750 people are expected to attend this multi-disease screening caravan which ends on December 14.

R. K.
More than 800 active people screened since the start of the health caravan initiated by the Association Santé en Entreprise (SEE).
"A real success," rejoiced Erick Maville, CEO of SEE, this Friday, December 13, 2019, in the industrial zone of Yopougon, during the second stage of the multi-disease screening caravan with working populations.
"We have passed the 800 screenings achieved since the start of the tour, which is already above the objectives we had set," said Erick Maville.
For him, the strong participation recorded on all sites is proof that the multi-disease approach works and populations are more receptive.
HIV testing, which is often very feared, he continues, is more accepted in the case of multi-disease screening, therefore 100% of people screened for both HIV, viral hepatitis B and C, tuberculosis, diabetes, and hypertension.
This campaign is part of a collaborative project initiated by the Association Santé en Entreprise (SEE) in partnership with Santé Entreprise Afrique (SEA), and the technical and financial partners.
